Viniflora® CiNe™
Product Information
Version: 2 PI GLOB EN 02-11-2016

Description
Viniflora® CiNe™ is a freeze-dried pure culture of Oenococcus oeni. It is a heterofermentative malolactic bacteria which has been selected to ensure a fast and safe malolactic fermentation when inoculated directly into wine. It has an excellent allround tolerance towards pH, alcohol, temperature and SO₂.

The culture can be used both in red, rosé/blush and white wines.

Culture composition:
Oenococcus oeni.

Material No: 702574
Color: Off-white to slightly brown
Size: 5x2500 L
Type: Pouch(es) in box
Format: FD-DVS
Form: Granulate

Storage
< -18 °C / < 0 °F

Shelf life
When stored according to recommendation the product has a shelf life of 24 months.

Application
This culture has been selected for its overall outstanding performance and capability to perform a fast and safe malolactic fermentation in most red, rosé/blush and white wines without production of classical ‘dairy like’ malolactic flavors.

Among the features are:
• Direct inoculation into wine
• High numbers of active cells which ensure a quick start of fermentation
• High level of microbiological purity
• No degradation of citric acid into acetic acid, diacetyl and 2,3-butanediol
• Low production of volatile acidity
• Excellent all round tolerance towards pH, alcohol, temperature and SO₂
• Does not produce biogenic amines*

* During malolactic fermentation indigenous bacteria produce biogenic amines from amino acids. Viniflora® strains have been selected by Chr. Hansen using state-of-the-art techniques in screening, analyses or production to deliver malolactic cultures unable to produce the following biogenic amines: histamine, tyramine, putrescine, phenylethylamine, isoamylamine, cadaverine.

For further information about biogenic amines in wines and how Viniflora® products can help to reduce this food safety concern, please visit the following site: www.chr-hansen.com/wine.
**Directions for use**

Viniflora® freeze-dried cultures are adapted for direct inoculation into wine. No rehydration or reactivation is required.

1. Remove the pouch from the freezer 15 min. before use and place at room temperature. Make sure that the dosage complies with the amount of wine to be inoculated.

2. Open the pouch and add the granulated culture directly to wine. The culture can be dissolved in a smaller volume first and added to the total volume right after, if required. Make sure that the culture is completely dissolved in the wine.

**Technical Data**

**Performance**

Comparison of Viniflora CiNe and Viniflora Oenos during malolactic fermentation:

Viniflora CiNe does not degrade citric acid like other commercial (and spontaneous) bacteria for malolactic fermentation. Hence less production of acetic acid and diacetyl will be observed when using Viniflora CiNe.

* note that these inhibitory factors are antagonistic towards each other.
The individual tolerances are valid only if other conditions are favourable.
Check level of SO₂ produced by the yeast used for primary fermentation and be aware of level of free SO₂.

Legislation
The product is intended for food use as an œnological product and complies with the current International Oenological Codex. Chr. Hansen’s cultures comply with the general requirements on food safety laid down in Regulation 178/2002/EC and with Council Regulation (EC) No 606/2009 of 10 July 2009, as amended.

Food Safety
No guarantee of food safety is implied or inferred should this product be used in applications other than those stated above. Should you wish to use this product in another application, please contact your Chr. Hansen representative for assistance.
